

CLEANING ON SEALED SURFACES.

DAILY:

SPOT CLEANING:

- Mop up any spills immediately
- Spray effected area with SOLUTIONS - SEALERS 'REPLENISH'(As per label instructions)
- 'REPLENISH' is a surface cleaner, disinfectant, sealer booster in a 'ready to use' pack.
- Flush area clean with **fresh water** and walk behind scrubbing machine – for large areas.

GENERAL CLEANING:

WEEKLY:

- We recommend cleaning with warm water and a small amount of SOLUTIONS – Sealers 'NATURAL CLEAN' (As per label directions.)
- 'NATURAL CLEAN' is a super concentrated, non-acidic, phosphate free neutral cleaner. It eliminates soap scum build-up and hard water deposits when used regularly.
- 'NATURAL CLEAN' can be used in conjunction with a walk behind/ride on scrubber & wet vac. Area to be scrubbed using 'NATURAL CLEAN' then rinsed with *fresh clean water* and all water collected and disposed of. NB. 'NATURAL CLEAN' is bio-degradable.

STUBBORN STAINS:

1. Greases, soap scum, heavy grime build-up and mildew stains.

- We recommend cleaning with a diluted, bio-degradable phosphate free alkaline cleaner, SOLUTIONS – Sealers 'D-GREASE'.
- D-GREASE is industrial strength and must be diluted in accordance with instructions on the product for 'normal cleaning'.
- **EXCESSIVE /UNDILUTED USE OF PRODUCT WILL DAMAGE SEALED SURFACE**

2. Materials which contain colouring matter such as tomato sauce, cheese, dairy products, food colouring, tea and red wine.

- We recommend cleaning with *good quality* bleach. Please read the instructions for cleaning on the bleach bottle and carefully follow dilution and handling instructions for safety & health.

3. In ground dirt, scuff marks etc. (NOT TO BE USED ON ACID SENSITIVE SURFACES)

- Apply small amount of SOLUTIONS – Sealers 'D-SCALE' and work into *effected area only*. (Test Area for suitability for your surface type.) Re-Apply original sealer to ensure continued effectiveness.
- **EXCESSIVE /UNDILUTED USE OF PRODUCT WILL DAMAGE SEALED SURFACE**

4. Difficult to remove stains.

- Contact a professional cleaner or applicator who sealed your surface.

EVERY MONTH:

- We suggest using 'REPLENISH' **concentrate** to maintain the sealers effectiveness.
- Read label instructions for dilution rates and application method.

We do not recommend using solvent based cleaners such as xylene, acetone, mineral turps, kerosene, methylated spirits, rust and scale cleaners/removers, lime cleaners or any acidic cleaner.

CLEANING CAUTIONS:

Cleaners containing acid should *never* be used for routine maintenance. Acidic cleaners, even a light solution of vinegar and water, will etch polished natural stone and eventually damage tile. Acidic cleaners will also cause grout to deteriorate and strip the pigmentation from the grout. Heavy-duty cleaning may become necessary if tile cleaning has been neglected.

N.B. ALWAYS TEST ANY cleaning product for suitability on YOUR particular surface.
